Process	The seawater streams in the basins where the water evaporates. When the salt is dry, it is transported to the factory. The salt is stored in a big silo. And mixed with saltwater. In this high salt concentration solution the first cleaning is started. With a centrifuge the water and salt are separated. The salt goes to a second silo, and the process is repeated. If the salt is not clean enough it will be cleaned a third time. After the cleaning the salt is dried in a drier at a temperature of 190°C, during this process the amount of moisture can be regulated.
